

Watchman Lubrication System

Bulletin WM-2003

The **Watchman** Lubrication System is designed to accurately deliver, monitor, and protect oil delivery to Compressors, Pumps, and any other critical equipment. If you need oil anywhere, on any sort of equipment, we can do it!

The Original Watchman, manufactured by Sloan Brothers Co. in Oakmont PA.

- shipped in 24 hours to handle emergencies

- Made from the highest quality components including SB-2000 Pumps & SB Dividers W/ 5 year warranty.

Watchman Systems are used by industry leaders everywhere, such as:

Refineries

Amoco BP
Marathon/Ashland

Natural Gas Pipelines

El Paso/Tennessee Gas/ANR
Duke Energy/Texas Eastern
Northwest Pipeline

Cement Plants

Cemex TXI

Automotive

Ford Chrysler GM

Manufacturing

Alcoa Bethlehem Steel
DuPont GE

We will design, assemble, test, and ship a Watchman for your requirements *within two days*. We are familiar with all compressor applications as well as pumps, driers, filters, and any other lube application.

For reciprocating compressors, give us the compressor make, model, and RPM as well as the stroke and bore size of each cylinder. Check the oil lines to each cylinder, rod packing, or other points.

For Rotary Compressors, give us the make, model, size, and number of feeds required.

For any other application, just call us! We will work out the details of your lubrication needs over the phone.

Watchman systems work!

A typical compressor installation will pay for itself in less than a year in oil consumption savings, reduced attendance, maintenance requirements, and increased reliability.

Watchman Lubrication System

Automatic and protected lubrication for compressors and critical equipment

SB divider assembly with outlet check valves and indicators

Hermetically sealed proximity switch

Wizard III Monitor displays current delivery, provides alarms

12 Gallon supply tank with easy to see level gauge and vented fill

Shut-off valve and Y-strainer

Premier lubricator with SB 2000 pump units - 1 active, 1 spare

Liquid filled pressure gauge, 1/4 OD checked priming connection

10 micron HP filter

Main line bypass W/ extra rupture discs

Accessories

Explosion Proof

Class 1, Group C & D, Div. II
or

Class 1, Group B (Hydrogen)

Heater/Thermostat Mounted in tank

External level control

For automatic fill w/Explosion proof DTPT low level switch

Electrically Pre-wired to your site specifications

Protective Enclosure

Complete unit mounted in NEMA 4 enclosure with full view window

Motors supplied 1/3 HP TEFC Single or 3 phase motor as standard, others available.
